                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This DNA sequence codes for thermostable esterase VC16-16MC (W23076) of Archaeoglobus fulgidus VC16, an isolate that grows coptimally at 85 deg C and pH 7.0. It can be amplified from a pBluescript vector by PCR (see T79317-18). Claimed, newly identified polynucleotides (T79321-30) encoding esterases C (W23069-77, W23088) were recovered from genomic gene libraries. CC They can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases CC are stable at high temperature and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino companied to an alpha-keto acid using a claimed esterase. The enzymes can did to an alpha-keto acid using a claimed esterase. The enzymes can be useful as ilpening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lignocellulosic vaste, in the study of plant wall structure, plant resistance to companic matter decomposition and to select plants bred for production of highly degradable animal feeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid encoding heat stable esterase from thermophilic bacteria - which is active in organic solvents, useful in cheese paper manufacture, and to study plant resistance to disease

A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may also be useful as ripening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lignocellulosic waste, in the study of plant wall structure, plant resistance to disease and organic matter decomposition and to select plants bred for production of highly degradable animal feeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This DNA sequence codes for esterase 23mc1 (W23080) of Metallosphae prunae. Newly identified polynucleotides (T79321-40) encoding esterases (W23069-88), some of which are claimed, can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 905
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 65-66; 113pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                              and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may also be useful as ripening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable
                                                                                                                                                                                                                  This DNA sequence codes for thermostable esterase P1-8LC (W23077) of Sulfolobus solfataricus P1, which grows optimally at 85 deg C and pH 2.0. It can be amplified from a pBluescript vector by PCR (see T79319-20). Claimed, newly identified polynucleotides (T79321-30) encoding esterases (W23069-77, W23089) were recovered from genomic gene libraries. They can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high temperature and is considered to the production.
                                            sugar production from lignocellulosic waste, in the study of plant wall structure, plant resistance to disease and organic matter decomposition and to select plants bred for production of highly
                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid encoding heat stable esterase from thermophilic bacteria - which is active in organic solvents, useful in che paper manufacture, and to study plant resistance to disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        T79330;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of 1,4-diacetoxy-cis-2,3-epoxybutane to (2S,3R)-4-acetoxy-2,3-epoxybutan-1-0.1, and has no lipase activity using p-nitropalmitic acid as the substrate and no esterase activity using Tween 20 as the substrate. The new enzyme can be used for the synthesis of an insect pheromone of high biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (NITL )

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may also be useful as ripening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lignocellulosic waste, in the study of plant wall structure, plant resistance to disease and organic matter decomposition and to select plants bred for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This DNA sequence codes for whale mat sample 11.801 esterase es2 (W23083). Newly identified polynucleotides (779321-40) encoding esterases (W23069-88), some of which are claimed, can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high temperature and in organic solvents, making them superior for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Key

CC expression of genes in a first filamentous fungal (FF) cell relative to ceapression of the same genes in one or more second filamentous fungal (CC cells: The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the Same genes in one or more second filamentous fungal cells. Monitoring CC the global expression of genes from FF cells allows the production CC potential of the microorganisms to be improved. New genes may be CC discovered, possible functions of unknown open reading frames can be CC identified and gene copy number variation and stability can be CC identified and gene copy number variation and stability can be CC monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore CC morphogenesis, recombination, metabolic or catabolic pathway engineering. CC clones including elimination of redundancy as one spot on an array CC clones including elimination of the gene products to facilitate analysis of the results. F074/B to F11873 represents ESTs from According From Fusarium CC constitute. F11873 represents ESTs from According From Fusarium

expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses filuorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. F07478 to F11247 represents ESTs from Fusarium venenatum; F11248 to F11853 represents ESTs from Aspergillus niger; F11854 to F14878 represents ESTs from Aspergillus oryzae; and F14879 to F15377 represents ESTs from Trichoderma reesei, which are all specifically claimed in the present invention

                                    Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hydrolyses oleyl benzoate and p-nitrophenyl benzoate. The invention includes a vector containing the esterase gene, and a method for preparing the esterase protein. The esterase is useful for the preparation of optically active substances necessary for the intermediate materials for drugs.

The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTS CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the CC same genes in one or more second filamentous fungal cells. Monitoring CC the global expression of genes from FF cells allows the production CC potential of the microorganisms to be improved. New genes may be CC identified and gene copy number variation and stability can be CC identified and gene copy number variation and stability can be CC adapt to changes in culture conditions, environmental stress, spore CC monitored. The expression of genes can be used to study how FF cells close to changes in culture conditions, environmental stress, spore CC morphogenesis, recombination, metabolic or catabolic pathway engineering. CC clones including elimination of redundancy as one spot on an array CC equals one gene or open reading frame, and organisation of the CC unalysis of the results. F07478 to F11247 represents ESTs from Fusarium CC enantum; F11248 to F11853 represents ESTs from Aspergillus oryzae; and F14879 to CC F15337 represents ESTs from Trichoderma reesei, which are all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
